Work Experience

Tata Consultancy Services (TCS)

2 years

• Software Engineer - Full Stack

(July 2024 - Present)

- Developed & debugged 40+ REST APIs for a trading platform processing with 99.95% transactional accuracy.
- Improved API efficiency by 40% by parallel batch processing, along with query aggregation, pagination, and caching.
- Developed multiple Spring Batch jobs for report generation, scheduling, database cleanup, and large-scale data processing.
- Developed 10+ views (pages) and 30+ UI components for a banking OPS application, with React.js & Lit.
- Developed an internal tool to parse and compare COBOL strings, reducing debugging time by 80%.
- Implemented recursive functions to efficiently modify, visualize and render XML data on UI.

Tech Stack: Java, Spring Boot, Spring Batch, Oracle DB, Docker, Git, Azure, JavaScript, React.js, Lit Framework

Aulacube Technologies

4 Months

• Software Development Intern

(Mar 2024 - Jun 2024)

- Built an admin dashboard for student data, improving readability, management, and client satisfaction by 40%.
- Fixed 30+ unresponsive UI issues on the AulaEdge website for small-screen devices.
- Introduced Tailwind CSS to the existing code base for faster and responsive styling.

Tech Stack: Typescript, React.js, Ant Design, Chart.js, Git.

Education

B.Tech - Computer Science (Mathematics and Computing)

CGPA: 7.63

Netaji Subhas University of Technology (NSUT), New Delhi

(2020 - 2025)

AISSCE (CBSE Class 12)

Score: 87%

Vishwa Bharati Public School, New Delhi

(2019 - 2020)

Projects

Memoize - Productivity Suite - AI, Docs, Events and more

(Java, Spring Boot, Spring AI, RAG, LLM, PostgreSQL, PgVector, React.js, Capacitor, Kubernetes, Docker, Github Actions)

- Built a Full-stack productivity suite with an **AI-powered LLM (MemoAI)**, Rich text editor and Events scheduling features.
- Developed 25+ RESTful APIs with **Spring Boot**, **PostgreSQL**, and **JPA**, optimizing db performance by query tuning and pagination.
- Implemented secure **JWT-based authentication** and **RBAC** using **Spring Security**, with **OAuth2** for Google login.
- Integrated Gemini 3.5 Flash via **Spring AI**, using **pgVector** for **RAG-based conversational memory** and **context retention**.
- Developed an efficient **Event propagation** function from scratch for scheduling weekly, monthly and yearly recurring events.
- Implemented **Rich text editor** in **React.js** by leveraging **Tiptap-UI** components, storing content and formatting in JSON format.
- Used **K3s** with 1 node cluster with 2 deployment instances each for Client and Service. Used **Traefik - Ingress** for api gateway routing and load balancing. Automated CI/CD using **github actions**.

Codeboxes - Online Code Editor and Compiler

(Java, SpringBoot, Microservices, IPC, MongoDB, Next.js, ShadCN, Tailwind, Kubernetes, Docker, Github Actions)

- Developed a full-stack online code editor which can execute codes in 6+ major programming languages.
- Created 15+ REST CRUD APIs using **Spring Boot** (REST Maturity Level 2) and secured them with **JWT-based** Spring Security.
- Built a **Docker-based** code execution service using Bash and **ProcessBuilder** with self-hosted containers. (No 3rd party APIs used)
- Moved to **Microservice** architecture by separating User, Auth and Code services, achieving overall API availability of 99.5%.
- Deployed **1 Kubernetes cluster** node with 2 deployment instances per service. Used **Ingress** for api gateway routing and load balancing. Automated CI/CD using **github actions**.
