Work Experience

Tata Consultancy Services (TCS) 1 year 8 months (Jul 2024 – Present)

- **Software Engineer**
 - Built REST APIs for ESOP trading platform processing 60K+ trades annually with 99.95% transactional accuracy.
 - Enhanced API efficiency by 40% via query aggregation through effective use of table joins, pagination, and caching.
 - Developed Spring Batch jobs for report generation, scheduling, database cleanup, and large-scale data processing.
 - Developed an internal tool to parse and compare COBOL strings, reducing debugging time by 80%.
 - Optimized frontend performance by 20% through reducing API calls & preventing unnecessary full-page re-renders
 - Implemented memoized recursive functions to efficiently visualize and modify XML data.

Tech Stack: Java, Spring Boot, Spring Batch, Oracle DB, Git, Azure, JavaScript, React.js, Lit Framework

AulaCube Technologies 4 months (Mar 2024 – Jun 2024)

- **Software Development Intern**
 - Built an admin dashboard for student data, improving readability, management, and client satisfaction by 40%.
 - Fixed 30+ irresponsive UI issues on the AulaEdge website for small-screen devices.
 - Introduced Tailwind CSS to the existing code base for faster and responsive styling.

Tech Stack: Typescript, React.js, Ant Design, Chart.js, Git.

Education

B.Tech - Computer Science (Mathematics and Computing) CGPA: 7.63 (2020 – 2024)
Netaji Subhas University of Technology (NSUT), New Delhi

AISSCE (CBSE Class 12) Score: 87% (2019 – 2020)
Vishwa Bharati Public School, New Delhi

Projects

Codeboxes - Online Code Editor
(Java, SpringBoot, Microservices, IPC, MongoDB, Redis, Next.js, Tailwind, Kubernetes, Docker, Github Actions)

- Developed a full-stack online code editor which can execute codes in 6+ major programming languages.
- Create REST CRUD APIs using Spring Boot (maintaining REST Maturity Model Level 2), and Configured Spring Security for JWT based authentication and Authorization.
- Built a code-execution service with Bash & Docker, that communicates with the server via IPC (ProcessBuilder). Removed dependency on any 3rd party API for code execution entirely (Increased code execution limit to infinity).
- Switched to microservice architecture separating User, Auth and Code execution services, achieving overall API availability of 99.5%.
- Deployed 1 Kubernetes cluster node with 4 deployment instances per service. Used Ingress for api gateway routing and load balancing. Automated CI/CD using github actions.

Dog Breed Identifier
(Java, Spring-Boot, AI, Machine Learning, Tensorflow, TypeScript, Svelte, Sveltekit, Tailwind)

- Built a CNN image classifier achieving 95%+ accuracy in classifying dog breeds using Python and TensorFlow.
- Served the trained model in a Spring-Boot server to use it as an API. Used Tensorflow Core Java Library for model loading, image preprocessing and prediction.
- Migrated from React.js to Svelte for frontend, gaining approx 60% faster load times and 90% smaller bundle size.

Mini Tic-Tac-Toe - Online multiplayer tic-tac-toe game
(Socket.io, Express.js, Node.js, React.js, Tailwind)

- Structured a bi-directional WebSocket server using Socket.io, to achieve low-latency, real-time communication. (90% faster and less bandwidth usage than constant HTTP polling)
- Designed a robust lobby management and scoring system (Only 2 person per lobby, with rematch options).
- Also implemented in-game chat using parallel socket connection between both players.

Technical Skills / Tech Stack

Languages: Java, JavaScript, Typescript, Bash, SQL, YAML, HTML, CSS
Frameworks, Libraries & tools: Spring-Boot, Node.js, Express.js, Redis, STOMP, Socket.io, Kafka, MongoDB, PostgreSQL, Kubernetes, Docker, Nginx, Github actions, Git, Linux, React.js, Next.js, Svelte, Sveltekit, React-Native, Tailwind.
Soft skills: Problem-Solving, Attention to detail, Collaboration, Communication, Adaptability, Ownership, Time management, Continuous learning.
